

Credit Card Performance and Customer Insights

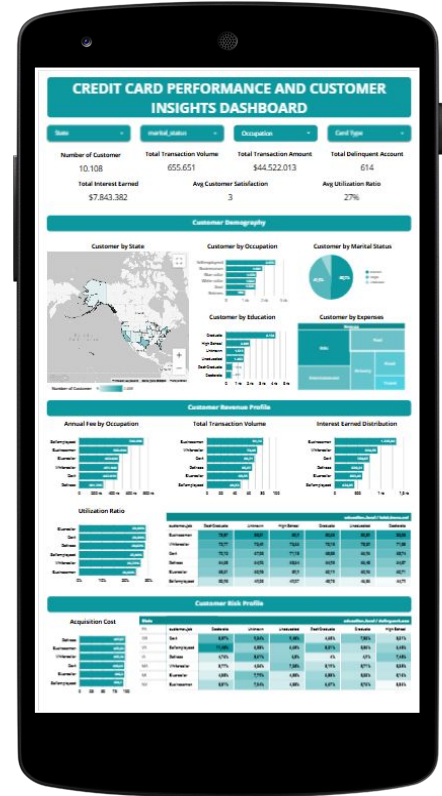

by Zulyan Firdaus

About Project

This is a dummy project from the results of my learning in the online course, MySkill. This project is a dashboard to find out insights from credit card users to make the right decisions in business made using Looker Studio tools.

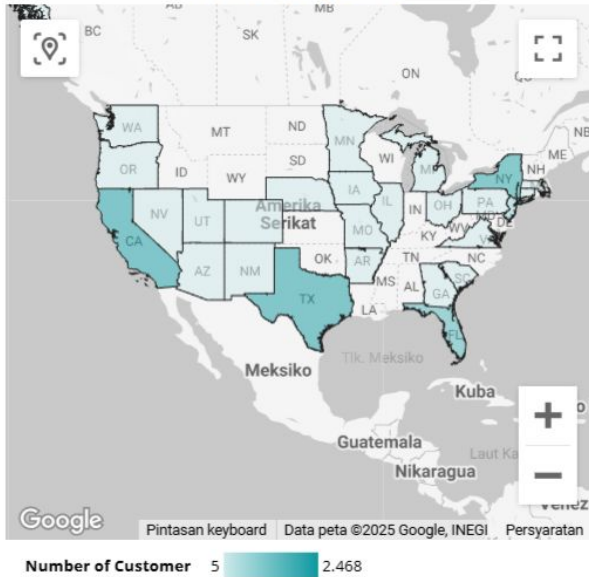

This project was created to answer several business questions:

1. What is the distribution of the number of customers by domicile and in terms of their background?
2. Which customers with which backgrounds are the most profitable?
3. What is the number and percentage distribution of accounts with a high risk of loss?

[Discover the Dashboard here](#)

Customer by State

However, **New York** state is the state that has the **highest number** of delinquent accounts with **154 customers** or a ratio of about **6.7%**. **California** followed with **145 customers** and a ratio of about **5.8%**. **Texas** **144 customers** with a ratio of about **6%**. **Florida** **90 customers** with a ratio of **5.2%**. And **New Jersey** **45 customers** with a ratio of **6.2%**. These states need to be considered so that the potential for delinquent accounts can be minimized.

State with the Highest Number of Customers

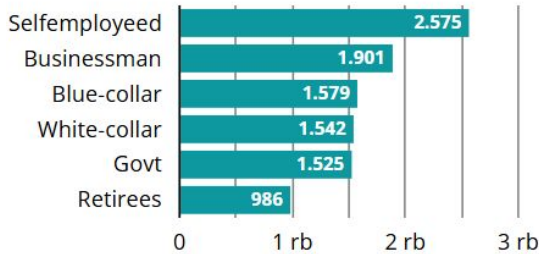

Customers are spread across most of the states in the United States, totaling 28 out of approximately 50 states.

The states with the **highest number** of customers are **California** with **2,468** customers, **Texas** **2,394** customers, **New York** **2,270** customers, **Florida** **1,711** customers, and **New Jersey** **716** customers.

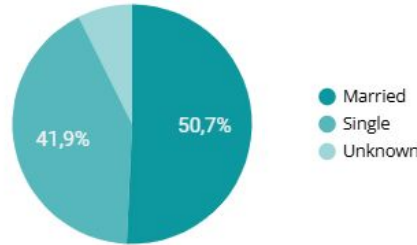

State	Delinquent Account ▾
NY	154
CA	145
TX	144
FL	90
NJ	45
IA	6
MI	5

Number of Customers from Several Aspects

Customer by Occupation

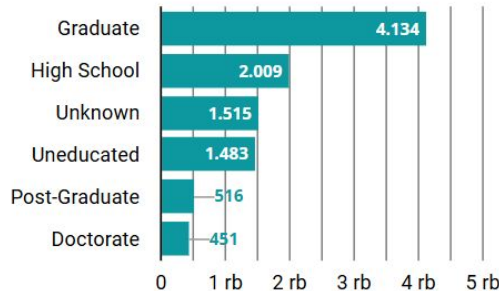

Customer by Marital Status

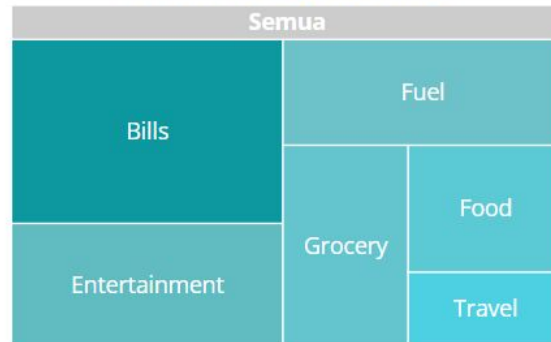

In terms of occupation, the **majority** of credit card users are **Selfemployed** and **Businessman**. When viewed from an educational background, customers with **Graduate** education are the **most dominant**.

Customer by Education

Customer by Expenses

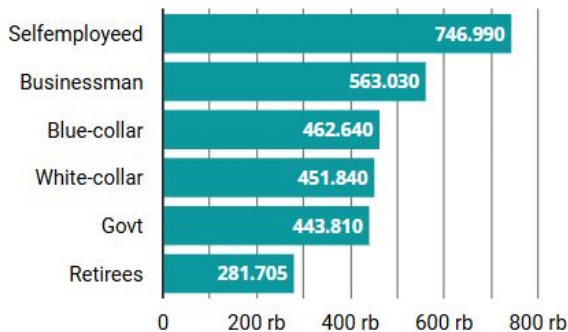

Customers who are **married** have a **dominating number**, which is **50.7%** of the total population. Customers who are **single** are **41.9%**, and the rest are still unknown.

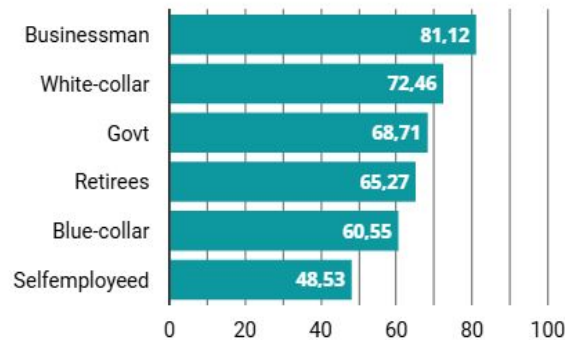

Credit card usage is **more dominated** for the purposes of **paying bills, entertainment, and for fuel**. Food and travel needs are the **lowest** spending patterns using credit cards.

Potential Profits by Occupation

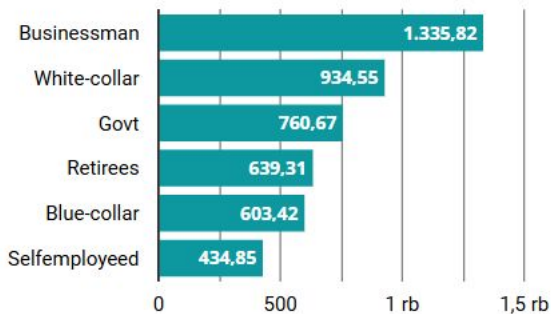

Annual Fee by Occupation

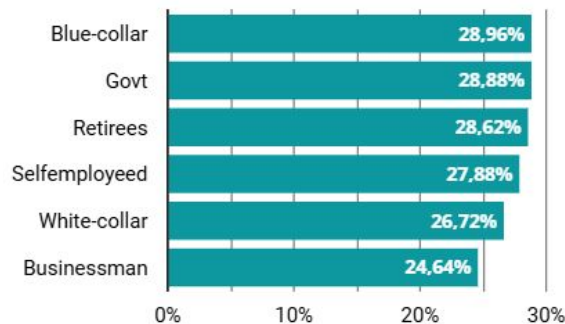

Total Transaction Volume

Interest Earned Distribution

Utilization Ratio

Based on the graph, the **highest profit** from subscription fees comes from **Selfemployed** and **Businessman**. This is useful if you want to take advantage of subscription fees.

Businessman and **White-collar** are the categories that make frequent transactions while Selfemployed is the lowest. This is useful if you want to take advantage of interest on each transaction.

Although Businessman has high total transactions, its utilization ratio is very low.

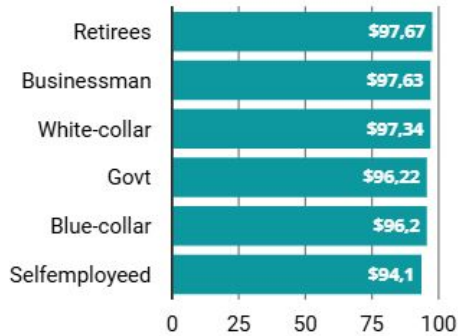

Target Customers Based on Background Segmentation

education_level / total_trans_vol						
customer_job	Post-Graduate	Unknown	High School	Graduate	Uneducated	Doctorate
Businessman	78,87	83,21	80,9	80,68	80,89	82,03
White-collar	72,77	72,49	72,66	72,15	73,29	71,38
Govt	70,12	67,05	71,13	68,58	66,96	68,74
Retirees	64,68	64,92	65,64	64,93	66,48	64,57
Blue-collar	63,61	60,95	59,9	60,19	60,96	60,71
Selfemployeed	52,95	49,05	49,07	48,73	46,56	44,79

Based on the table, Businessman with unknown education have a very high average transaction. Meanwhile, Selfemployed with a Doctorate is the lowest. We can prioritize **Businessman, White-collar, Govt, Retirees, and Blue-collar** to focus on the profit that can be made from the interest on each transaction. Selfemployed people from each educational background have an average transaction that is still relatively low.

Customer Acquisition Risk Percentage

Acquisition Cost

customer_job	education_level / delinquent_acc					
	Doctorate	Unknown	Uneducated	Post-Graduate	Graduate	High School
Govt	8,57%	9,24%	9,43%	4,65%	7,32%	5,21%
Selfemployed	11,45%	6,58%	6,68%	8,21%	5,56%	6,45%
Retirees	4,76%	8,61%	6,8%	4%	4,9%	7,45%
White-collar	3,77%	4,26%	7,25%	5,19%	5,71%	5,25%
Blue-collar	4,35%	7,79%	4,55%	6,33%	5,22%	5,16%
Businessman	5,81%	7,04%	4,55%	6,67%	5,76%	3,36%

Based on the Acquisition Cost chart, it turns out that there is no significant difference in the costs incurred for customer acquisition. When viewed as a whole, **Govt customers have a high risk of delinquent accounts**. In addition, **Selfemployed customers with a Doctorate, Post-Graduate, and Retirees whose education is unknown also have a high risk of delinquent accounts**. The **Businessman category has the lowest average percentage overall**. Businessman whose education is unknown and Post-Graduate graduates are still relatively high. Meanwhile, High School graduates are the lowest risk.

Resume

1. Customers are spread across most states in the US. The five states with the highest number of customers are California, Texas, New York, Florida, and New Jersey. Self-employed and businessmen have the highest number of customers. The majority of customers are married and most transact to pay bills.
2. If the profit is viewed from the Annual Fee, Selfemployed and Businessman are the most profitable customers. If the profit is viewed from the interest earned on each transaction, Businessman and White-collar are the most profitable customers. In addition, there is no significant difference in utilization ratio. However, Businessman is the lowest percentage.
3. Govt customers have the highest risk of delinquent accounts across educational backgrounds, Selfemployed with Doctorate, Post-Graduate, and Retirees whose education is unknown are also at high risk. However, Businessman is the lowest risk category across all education backgrounds.

Recommendations

Create offers or loyalty programs that are relevant to customer spending patterns

Provide promos for states that have the highest number of customers to increase customer retention.

Prioritize Businessman and White-collar customers.

Thank You!
